1 Introduction

“Sam’s place” is a arts centre providing musical instruments training and arts for a decade. Apart from that it also provides other recreational facilities. It attracts a lot of visitor’s attention especially because all age groups are allowed and it opens on all days. But now, because of the large number of visitors, it has been difficult for them to keep records manually.

In this project, we are tasked to create a C# desktop application that helps to manage records of tickets and visitors. The system must be able to record data on all days of a week (from Sunday to Saturday). Recreation centre has different ticket options based on age (child and adult), based on days (holidays and weekdays), and based on group (Group of 5, Group of 10) and time duration (1hr, 2hr,, unlimited). The application must be designed around these aspects.

In comparison, doing things like records manually is much easier in an automated environment than doing it manually. The application must be able to conduct all the things that required to be done manually, smoothly and provide a better efficiency for the recreation centre.

In this document, we will be going through all the process of the development of the system until its testing.

4 User Manual

In this section, we are going to be looking at how to approach the system.

1. First shows up login form. We have two options: Login as **Admin** or **Staff**.

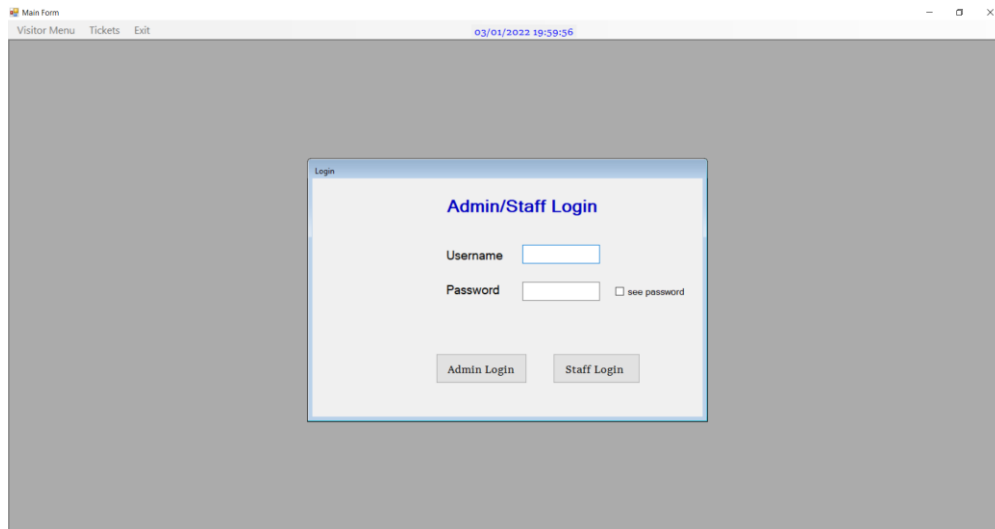

Figure 3: Login form

2. We cannot access the menu items without logging in.

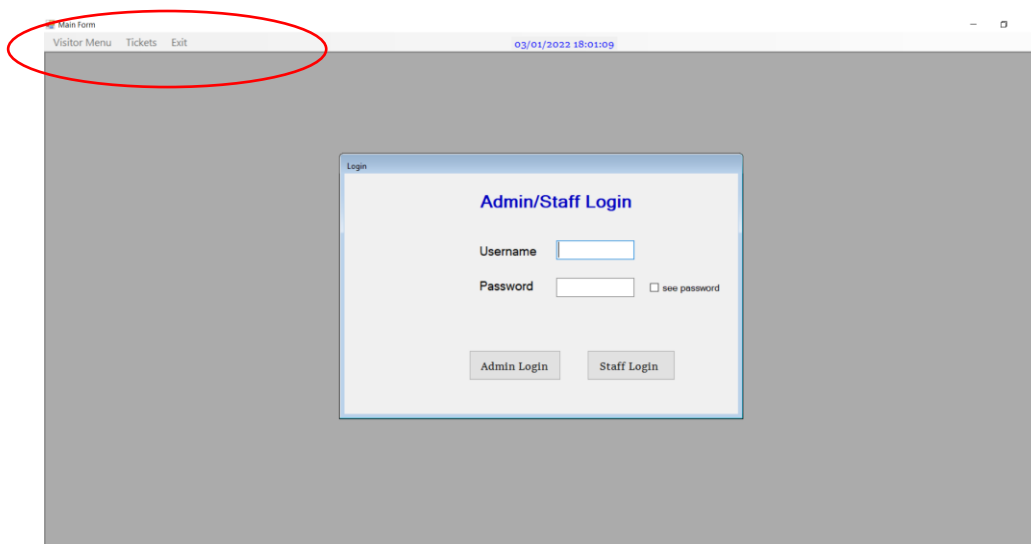

Figure 4: Inaccessible menu items

3. To login as Admin, use **Admin** as both **Username** and **Password**.

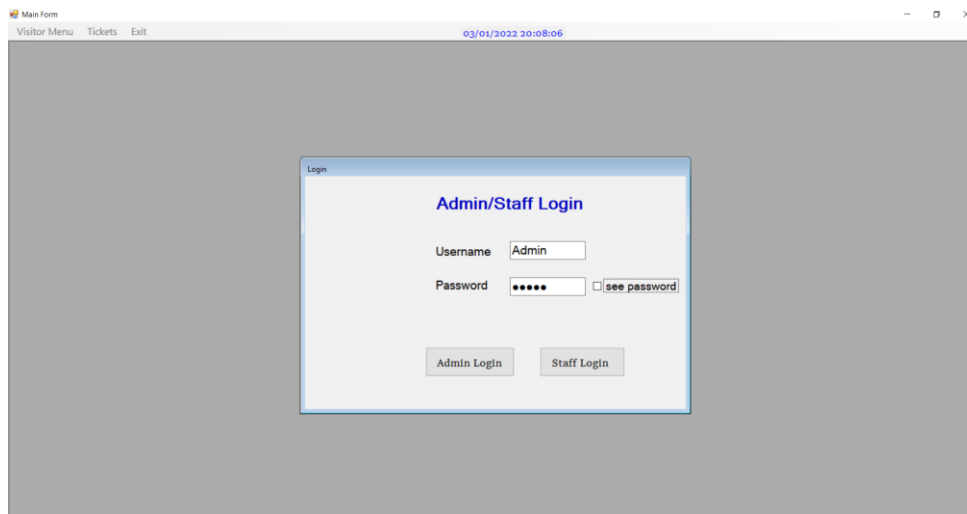

Figure 5: Admin login with hidden passwords

Figure 11: Visitor Exit Form UI

7. Tickets form. In the tickets form, only the admin can update and save prices. Staff won't be able to update prices.

Select ticket pricelist type

- Pricelist of tickets during weekdays
- Pricelist of tickets during holidays
- Pricelist of tickets during holidays

Figure 12: Tickets UI

8. Tickets form opened by Admin.

The screenshot shows a window titled 'TicketPriceList'. At the top, there is a label 'Select ticket pricelist type' followed by a dropdown menu set to 'Pricelist of tickets during weekdays'. Below this is a table with the following data:

Ticket_Category	Rate_for_1hr	Rate_for_2hr	Rate_for_3hr	Rate_for_4hr	Rate_for_wholeday
Child(5-12)	400	800	1050	1450	2200
Adult(>12)	550	1000	1500	2100	2800
Group of 5	3000	5000	8000	12500	25000
Group of 10	5000	8000	15000	22000	40000

Below the table is a 'save changes' button.

Figure 13: Tickets price list during weekdays

The screenshot shows the same 'TicketPriceList' window, but the dropdown menu is set to 'Pricelist of tickets during holidays'. The table now displays discounted rates for weekends, with the text '!!Yoooo!! Discounted price on weekends' above it:

Ticket_Category	Rate_for_1hr	Rate_for_2hr	Rate_for_3hr	Rate_for_4hr	Rate_for_wholeday
Child(5-12)	300	600	800	1200	1900
Adult(>12)	450	900	1350	1850	2300
Group of 5	2800	4600	7500	11000	22000
Group of 10	4500	7500	14000	20500	35000

The 'save changes' button remains at the bottom.

Figure 14: Tickets price list during weekends

9. Tickets form viewed by Staff (**No save button available**).

Ticket_Category	Rate_for_1hr	Rate_for_2hr	Rate_for_3hr	Rate_for_4hr	Rate_for_wholeday
Child(5-12)	400	800	1050	1450	2200
Adult(>12)	550	1000	1500	2100	2800
Group of 5	3000	5000	8000	12500	25000
Group of 10	5000	8000	15000	22000	40000

Figure 15: Tickets form viewed by Staff

10. Generate Report sub-menu. **Only Admin** can access it.

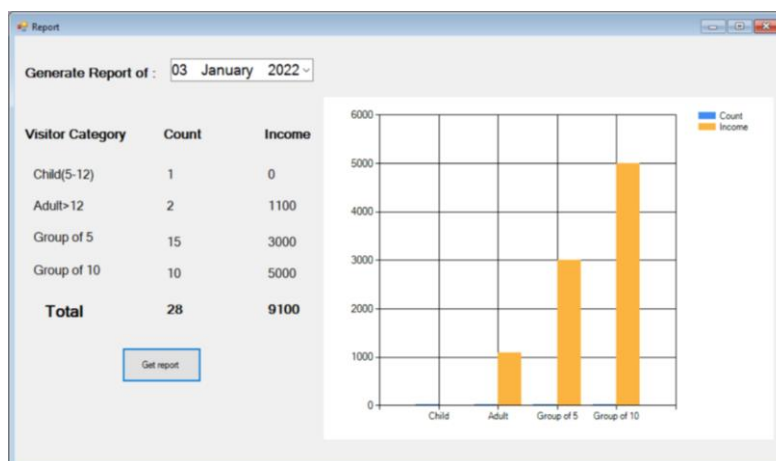

Figure 16: Daily Report UI

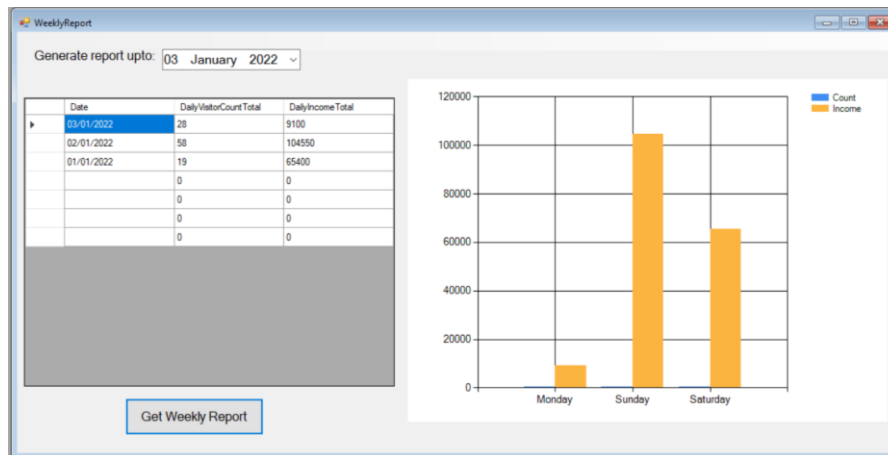

Figure 17: Weekly Report UI

In **fig: 17**, there are only 3 data even though it is a weekly report. The reason for it is we only have 3 dates in our system. That is why there are no other dates shown. If other dates were available, it would have appeared in the chart.

11. Exit sub-menu.

Figure 18: Logout dialog box

If “**Yes**” is clicked, login form will reopen. If “**No**” is selected, then the dialog box disappears.

Clicking exit will entirely close the system.

5 System Validation

Validating is important in a system because it prevents wrong or incorrect data. Our system contains the following validations.

- Validating login form.

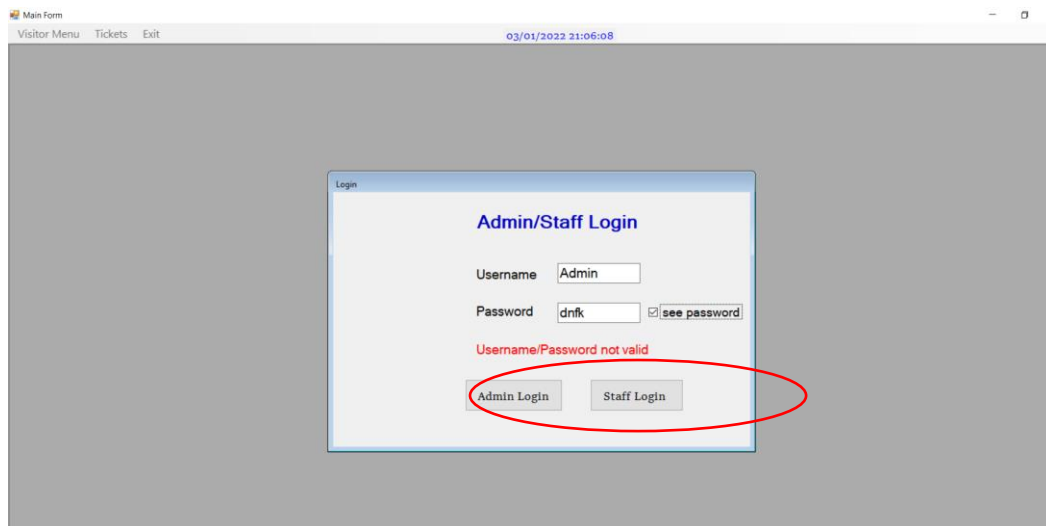

Figure 21: Validating login

- Validating entry details

Figure 34: Successfully updated list after visitor exit

- Validating ticket price update

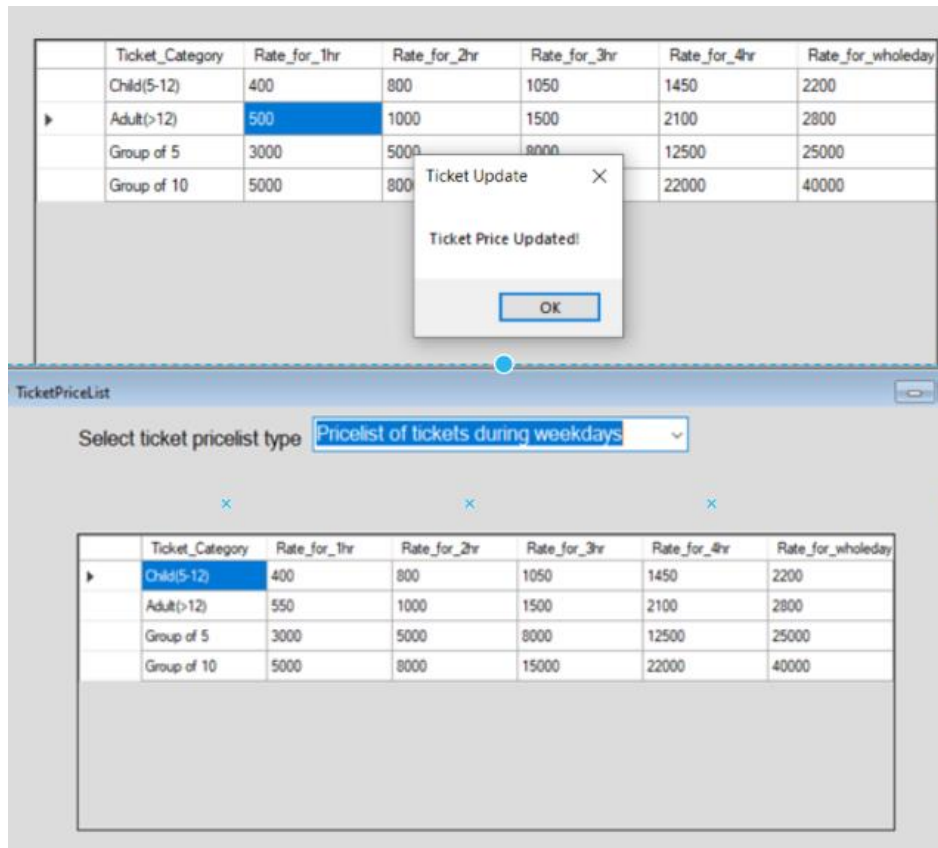

Figure 35: Successfully updating ticket price

- Validating Menu Items

We have already seen an example of menu items validation in User Manual Section 2.4.

6 Methods used in forms

6.1 Login Form

- btnAdmin_Click(): Logs in as Admin.
- btnStaff_Click(): Logs in as Staff.
- passwordtxt_TextChanged(): secures password.
- Pw_see_hide_CheckedChanged(): hides or shows password.

6.2 Main form

- f1_FormClosed(): close event for f1.
- ShowLogin(): displays login form.
- VisitorEntryForm_Click(): Opens visitor entry form.
- VisitorExitForm_Click(): Opens visitor exit form.
- TicketsList_Click(): Opens ticketlist form.
- getdailyreport_Click(): Opens daily report form.
- getweeklyreport_Click(): Opens weekly report form.
- LogOut_Click(): Opens Dialog and gives logout options.
- Exit_Click(): closes the system;

6.3 Visitor Entry Form

- visitorCategory_SelectedIndexChanged(): displays components based on the selected value.
- VisitorEntryForm_Load(): activates event inside when the form is opened.
- ValidateVisitorDetails(): checks if the data is correct or not as programmed.
- ValidateVisitorCategory(): checks if the visitorcategory input is correct or not.
- ValidateVisitorEntryTime(): checks the entry time.
- AddVisitor_Click(): Adds visitor data in list and serialize the data.
- VisitorEntryTime_Click(): gets time when clicked.
- AddVisitorToCsv(): Adds data from list in csv file.
- ClearInputs(): clears input fields when called.

6.4 Visitor Exit Form

- Searchvisitor_Click(): Deserializes the data and search for visitor.
- RetriveVisitor(): retrives all data of visitor and display.
- VisitorExitTime_Click(): gets current time.
- Visitorstaytime_Click(): gets visitor stay time.
- Pay_amount_Click(): gets amount to be paid.
- ClearInputs(): clears input fields when called.
- VisitorExitForm_Load(): activates event inside when the form is opened
- VisitorConfirmExit_Click (): de-registers visitor from the list and csv file.

6.5 Ticket Price List Form

- Ticket_day_type_SelectedIndexChanged(): shows corresponding ticketlist csv file.
- UpdateTicketPrice_Click (): overwrites old data in csv file with new data.

6.6 Daily Report Form

- see_report_Click (): shows daily data and chart.
- generateChart (): assigning value into the chart.

6.7 Weekly Report Form

- GetWeeklyReport_Click (): shows total daily data of a week and in chart.

7 Conclusion

In this project, we are assigned to develop an online based visitor management system by “Sam’s place” recreation centre to record their business details. We have used **C # desktop app** in **Visual Studio** to create this system.

Although, Visual Studio made this project very easy, this project isn’t as easy as I described. Many errors and many confusions arose during the making of this project. The given project has come to an end. To complete this coursework, we expended a lot of time on studies and research in the given field. I really enjoyed doing it even though it was frustrating when a small error leads you to delete a whole file. After visiting so many websites and tutorials and videos, it certainly sharpened my research habits. I would like to thank and congratulate the individuals that helped me in this task.
